

Science

The thoughts of experimenting with chemicals and other things are a great thought to most of Fairfield Central High School students. The science courses are Biology, Chemistry, Physics, and Physical Science. The credits that are needed to graduate for some are two and some are three. These courses maybe even be needed to enter some colleges which the students will also need to think about when making out their schedules for the up and coming school year.

The courses are challenging to the mind and also unpredictable to the student entering the classes. The students have lab days setup for them to experiment with certain things that they were unaware of them being able to do. That also gives them access to things that they are not able to go out and buy because the chemicals are trusted in today's society.
