Computer Science and Technology

The Computer Science class is a strenuous subject with all of the hard work paying off at the end of the year. For students in Introduction to Computer Programming, they are exposed to programming in the C++ language and other aspects of computer hardware and software. For the students in Advanced Placement Computer Science, they have the opportunity to take the AP Computer Science Exam, which could allow the students to receive a college credit for computer science. AP students must study the complete C++ programming structure and the Big Integer Case. Sophomore Tameka Gray says, "computer science is a hard class that requires a lot of time and effort in order to pass the class."

For those students who are not interested in programming computers, Mrs. Hope's keyboarding and computer technology classes are available. In these classes students learn about Microsoft Office products such as Word and Excel. They also receive some basic skills in typing and creating reports, presentations, and resumes.
