

THE WINNS OF CHANGE

DIGGIN' IT! Under the careful supervision of "foreman" Adrian Wilkes, new headmaster Deane Fowble digs into the hard clay soil to prepare a hole for the new shrubbery. Clean Up Day also involved sprucing up around the new science building.

FINISHING TOUCHES. Directed by Leslie Douglas, volunteer carpenters Ivey Matthews and Milton Hinnant make the adjustments to finish the science building overhang. Many supporters of RWA devoted time and talent to make this building a reality.

FROM DREAM TO REALITY. With the science now functional, this allows the better facilities to house the chemistry and biology classes and labs. This change was much needed as the existing classrooms were over-crowded.

UNDER CONSTRUCTION. Daddy volunteers Joe Wilkes and Billy Ladd log in more volunteer time operating heavy road machinery. This improvement opened up a new and better access to the athletic fields behind the campus.

KING OF THE ROAD. Just mention the need for grounds improvements at RWA and Joe McDaniel's name comes up. Joe and a handful of other parents were always willing to lend a helpful hand, and equipment, too.

SIGN SCRUBBIN'. Teacher/parent Martha Ladd and new associate headmaster Beth Reid show their love for RWA on Clean Up Day as they scrub down the granite sign out front. Could they be reminiscing their own days as RWA students?

BACKHOE FUN! Part of the Work Day is fun for some as students get a ride on the Ladd's backhoe. They pulled up and discarded the diseased red tips growing alongside the lower school building walls.

STROKES OF COLOR. After sanding hand rails, students and parents put on a fresh coat of paint to give it a new look. Margie Wilson, Ashley Matthews, and Adrian Wilkes were a few of those who worked.
