

**PORK PICKIN'.** Amanda Arnette and Earl Ogburn take in all the details of the pig dissection as Amanda pokes and probes. Mrs. Allen and her students were delighted to have the new science lab facilities available for such activities.

**BLOOD AND GUTS.** Sophomores Ashley Tolbert and Marcy Rice explore the most minute body parts of their pig. The students all worked hard on their dissection as it was the final assignment of the year from Mrs. Allen.

**SCIENCE FUN.** Kristen Pullen poses beside her science project in the new lab. Kristen's "Respiration and Transportation" experiment went to the state science fair and earned her Honorable Mention.

**BOARD WORK.** Board member John Swearingen literally does board work as he and parent Len Rosborough mount the dry erase boards in the new science building. Volunteer efforts from people like these made the project more cost efficient.
