

Science News

➤ NASA's Lunar Prospector finds scattered pockets of ice beneath the lunar surface. The presence of water could enable astronauts to use the moon as a kind of space-based filling station.

➤ An analysis of Eastern Seaboard weather shows it really does rain more frequently on weekends than during the week, an average of 22 percent more. Automobile emission patterns are the suspected cause of the phenomenon.

➤ Apple's translucent aqua-blue iMac personal computer, its first consumer offering in years, is marketed mainly for Internet usage and, therefore, doesn't come with a disk drive. Its popularity soars and it soon becomes available in several other colors.

➤ The comet Tempel-Tuttle causes a meteor storm when it passes by Earth. The comet will be visible again in fall 1999, after which it won't reappear for another 32 years.

➤ A computerized T-shirt, woven with fiber optics and electrically conducted thread, may soon monitor the health of soldiers, rescuers, the elderly and others who are medically vulnerable.
